

Combinaison Recherche, Filtre et Sélection multiple

You can combine the Search, Filter and Multiselect tools as desired to create an even more powerful search function.

Starting point

An example:

- Your project comprises both roller shutters and sunblinds.
- You want to create a [basic action](#) to control all roller shutters at the same time.
- You are in the **Create** overview window.
Screenshot

Procedure

1. Create a basic action and select the control for the action.
2. Click on the **NoFilter** button and choose 'open/close outputs'.
Result:
Roller shutters and sunblinds remain visible, other elements go grey.
screenshot
3. In the search box, type 'Roll'.
Result:
Only the roller shutters remain visible, sunblinds go grey.
Screenshot
4. Use Multiselect to select all roller shutters and add them to the action.
