

Notifications

What are notifications?

Notifications are messages that are sent from the installation to a touchscreen, smartphone or tablet. We distinguish between:

- push notifications
- informative notifications

Difference between push and informative notifications

The table below illustrates the difference between a push notification and an informative notification:

	Push notification (alarm)	Informative notification
Urgency	Important, must be read immediately.	Less important, does not need to be read immediately.
Form	<ul style="list-style-type: none">• Pop-up on touchscreen• Push notification on smartphone or tablet, even when the app is closed	<ul style="list-style-type: none">• Icon on touchscreen• Icon on smartphone or tablet, only when the app is open
How to create?	<ul style="list-style-type: none">• Creating a notification in the following advanced actions:<ul style="list-style-type: none">• Intruder alarm• Heating/cooling per circuit• Creating a notification in a conditional action.	Creating a notification in a conditional action
